

52F50 Compressor/Limiter (for API 500 series rack)

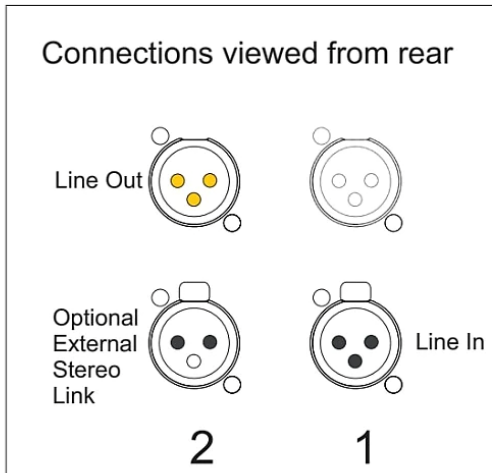

Installation

The 52F50 Compressor module is intended for professional application use in the API 500 series VPR racks and Lunchbox.

Installation should be done by a suitably qualified professional.

The units contain no user serviceable components or adjustments. The unit should not be operated without the appropriate racking system as some components become hot during normal operation.

IMPORTANT !!

Many lunchboxes and racks have the internal links fitted which connect pin 6 of all the API connectors.

Pin 6 has the control voltage for stereo linking. This control voltage is different for each type of compressor. Remove the links to avoid damage to different types of compressor.
